### DEXA BODY SCAN

### RESTING METABOLISM

### VO2 MAX

### RED LIGHT THERAPY

### COMPREHENSIVE BLOODWORK

- Gold standard for body composition analysis
- Accurately measures fat tissue, lean tissue, visceral fat and bone density

- Measure your body's daily caloric expenditure to maintain essential functions
- Learn if you have a fast or slow metabolism and how to improve it

- Measures maximum oxygen consumption during exercise
- Measures overall cardiorespiratory health & fitness
- Identifies your unique target HR intensity zones

- Red light Therapy uses red and near-infrared light to stimulate cellular energy, reducing inflammation, and promoting healing with physical contact. It's a safe and effective way to address various health concerns.

- Our bloodwork analysis provides a deeper look into your health, helping optimize metabolic function to enhance your performance and body composition goals.
